howsoever arising / after the egg donation program and/or as a result thereof in future.
damages, fines, expenses, costs and any other losses suffered for any reason whatsoever or procedure). This indemnity includes, but is not limited to possible liability, claims, actions, incorrect or incomplete information, undisclosed material facts affecting the egg donation alleged liability based on the relationship of the parties, breach, misrepresentation, furnishing result of e.g. travelling undertaken to partake in the egg donation program (including, for example, with the egg donation made / to be made by me to the intended parent(s), whether suffered as a attorney's fees, of whatsoever nature and howsoever arising albeit as a result of or in connection liability, claims, actions, damages, fines, expenses, costs and any other losses, including I hereby indemnify and hold Tammuz - International Surrogacy Ltd. harmless from and against any

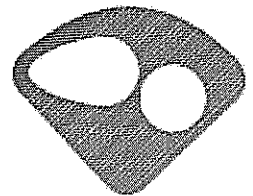

do hereby offer my written consent that oocytes donated by me may be used for an In Vitro Fertilization Program and Tammuz - International Surrogacy Ltd. ("Tammuz - International Surrogacy Ltd.") may act as a broker in finding intended parent(s) for my egg cells in India.

Anandi Emmenis
(Identity number 901203044084)

I, the undersigned,

DONOR CONSENT FORM
Description, Explanation & Informed Consent

Tammuz
INTERNATIONAL SURROGACY

information furnished by me without making an independent investigation into the accuracy of the information.

I understand that I will be treated with fertility drugs, monitored using ultrasound, tested for serum (blood) hormone concentrations and subjected to such other procedures as the medical professionals involved with these procedures determined are appropriate and are subsequently consented to by me. I have furthermore been advised and understand that eggs will be obtained from me surgically by ultrasound guided aspiration of follicles in my ovaries.

I have been informed and understand that the eggs obtained from me will then be donated to intended parent(s) to be used for the purpose of attempting to establish a pregnancy. I understand that the eggs obtain from me may be use by more than one intended parent(s). I understand that the intended parent(s) may be single or a couple and can be from any ethnic, age, sexual orientation or religion. I understand that the relevant medical experts involved in this procedure will attempt to fertilize these eggs with sperm the intended parent(s) male partner or with donated sperm. I have been informed and understand that if fertilization occurs and embryonic development begins, the embryos will be transferred to the uterus of the female recipient or of a surrogate.

I understand that by signing this consent I relinquish all claims to the eggs and any child that results from the use of eggs donated by me, including but not limited to the adoption of such child by any third party deemed by the Intended Parent(s) in the future. If there are eggs or embryos generated in excess of what is eventually transferred to a recipient's or a surrogate's uterus then the dispositions of those eggs or embryos will be determined by the Intended Parent(s). These eggs or embryos may be frozen for the Intended Parent(s)' future use, disposed of in terms of applicable medical policies and procedures or fertilized for research. I understand that the identity of the Intended Parent(s) shall not be disclosed to me unless I have donated eggs for use by a known designated Intended Parent(s).

Should anything happen to one or both of the Intended Parent(s) couple or should either or both of them die or legally separate, the rights of the eggs or embryo's will not vest in me.

I understand that my participation in the donation and travel to a foreign country is not guaranteed and the donation might be cancelled at any stage prior to departure. If the donation cycle is

email: info@Tammuz.com

cancelled once I am already in the foreign country, a percentage of the agreed donor reimbursement fee will be paid.

I realize my consent in terms of this document is final and agree not to institute any actions or bring any claims against Tammuz - International Surrogacy Ltd. or any of its agents and/or employees at any time after signature of this consent form.

I hereby consent to a physical examination, including taking blood and other bodily fluids, as well as a test for Syphilis, Basic blood count, Hepatitis B & C, HIV infection (AIDS) and acute glandular fever (CMV). I also agree to undertake the necessary genetics tests should Tammuz require me to do so. The aforesaid tests will be conducted to give the medical professionals involved in the procedures sufficient information to determine if I am an acceptable egg donor. I have been informed of the potential risks and consequences of egg donation, including but not limited to these listed below, and have been given ample opportunity to have my questions answered.

I am aware that the financial compensation I will receive in India is to cover any cost incurred that Tammuz is not responsible for. All flights, accommodation, breakfast, dinner, basic travel insurance, transfers to and from the airport, visa costs, blood tests, and medication provided in India will be covered by Tammuz. All other meals, transport, unpaid leave from work whilst travelling are covered within the US\$2,700 that I will be compensated with during my stay in India. I understand that should my partner/parent/sibling/offspring or any other guest, be it a relative or friend, accompany me in India, I will be responsible for all expenses relating to them. I am aware and accept that Tammuz may, in some cases, pay for the guests flights/accommodation/transfers and 2 meals daily, and the amount for this may be deducted from my donor fee. Should I not donate, these amounts will still be paid to Tammuz by myself.

Risks of egg donation include

1. Pregnancy or multiple pregnancy may result from my having vaginal intercourse during the cycle if adequate contraception is not used
2. Blood drawing: Mild discomfort and the possibility of developing a bruise at the needle site may occur. A blood clot in the vein may occur.

3. Ultrasound: This examination involves the use of a form of energy (sound waves) which at high energy levels may produce heat and tissue damage. At the extremely low energy levels utilized in diagnostic ultrasound adverse effects are highly unlikely to occur.

4. Ovarian over-stimulation: Overstimulation of the ovaries resulting in temporary feelings of bloating and abdominal discomfort may occur. Rarely severe illness may result from overstimulation in an egg donor requiring additional medical care.

5. Aspiration of oocytes under ultrasonographic guidance: Pain of short duration is likely. There is a possibility of seeing blood in the urine for a day following the procedure. Perforation of blood vessels, bladder, bowel, bleeding from the ovary, and pelvic infection are possible.

6. Anesthesia (General, Local, or IV Sedation): Numerous possible untoward reactions from various drugs and procedures used in anesthesia may result.

7. Risk to Potential Children: There are theoretical risks of the procedure which could potentially damage the embryo, with resultant later defects in the child. It is not known if the risk with this procedure (egg donation) is higher or lower than the risks associated with children conceived naturally.

I further understand that I MUST remain in Mumbai for a minimum period of 48 hours post retrieval.

I hereby consent to the donation of my eggs and confirm that I have informed my husband/spouse/life partner of my consent given in terms hereof.

SIGNED at South Africa (country) this 1st day of August 2012 in the presence of the undersigned witnesses.
